

AI Governance

Drive trust with every AI interaction

The world of agentic AI is largely unregulated—but not for long. As new local and industry regulations arise, you can't be caught unprepared. Without proper governance, AI systems can become liability engines rather than competitive advantages. Reduce AI risk across your organization to enable safe, scalable AI adoption.

Introducing Airia AI Governance

Airia's AI Governance solution drives trust and prepares your organization for the future of AI regulations. Audit and monitor your AI operations to ensure compliance with laws like EU AI Act, NIST AI RMF and ISO 42001 across all AI usage. Manage and automate your AI policies so you have peace of mind knowing that employees are innovating without risk.

Key Benefits

- Automation to handle high risk scenarios as they're detected
- Prepare for all local and industry AI regulations—present and future
- Transparency across AI usage regardless of platform
- Human-in-the-loop agent approvals across for an added layer of confidence
- Integrate with existing GRC platforms to quickly get started with AI governance

The screenshot displays the Airia AI Governance interface. At the top, 'Call Details' are shown for a call on 4/2/25 at 1:09PM. The model used is 'OpenAI gpt-4o', with a duration of 8.87s, 12472 tokens, and a 'Streamed' status. Client IP is 76.105.103.228 and User Agent is Qa/JS 4.78.1. Prompt Tokens are 12253 and Completion Tokens are 219. Below this is the 'Chat History' section. A 'REQUEST' bubble contains the text: 'Review the attached document and summarize the prohibited AI practices.' A PDF icon labeled 'EU-AI-ACT.pdf' is attached to the request. The 'RESPONSE' bubble contains the text: 'The EU AI Act prohibits certain use of AI which includes: • Systems that manipulate peoples' decisions • Systems that classify people based on their social behavior • Systems that scrape facial images from the internet or CCTV'.

Core Features

Governance Dashboard

Get insights into your most used models and agents to quickly assess risk levels and share insights

Audit & Observability

Document every AI interaction to monitor latency, throughput, and system health

AI Inventory Management

Track all AI assets across platforms in one central location to better understand AI usage

Risk Classifications

Tag agents, models, and data sources based on custom-defined organizational risk

Compliance Reporting

Generate reports for applicable regulations and industry frameworks for all your AI assets

AI System Controls

Define user roles and responsibilities for platform users to perform critical actions or approvals

ABOUT AIRIA

Airia is the enterprise AI security and orchestration platform that enables organizations to deploy AI quickly, safely, and at scale. Built for even the most complex and regulated environments, Airia reduces vulnerabilities in agentic ecosystems and streamlines workflows across agents, models, and an organization's applications and data sources. Airia removes the complexity that often accompany AI adoption, allowing enterprises to operationalize AI with trust, control, and measurable impact. Today, hundreds of organizations around the world are transforming the way they work with Airia. Learn more at airia.com.
